FOR IMMEDIATE RELEASE

MATTHEWS RELEASES ACCUSCAN™, A PIGMENTED PIEZO INK WITH IMPROVED SHELF LIFE AND SUPERIOR TOLERANCE TO HEAT AND HUMIDITY

Pittsburgh, PA, July 22, 2016 – Matthews Marking Systems, a leading manufacturer of marking and coding products, has released AccuScan™, a new and improved ink for corrugated case coding. The ink features a superior tolerance to high temperature and humidity environments and an increased shelf life in both sealed and opened bottles.

AccuScan™ produces excellent bar code readability, minimizes ink bleed on porous surfaces, and is ideal for printing high resolution graphics and fonts. AccuScan™ has high water fastness and light fastness ratings and dries within two seconds on corrugated cases, making AccuScan™ an excellent choice for direct carton printing and label replacement applications.

AccuScan™ boasts an 18-month shelf life for factory sealed bottles, providing customers confidence that ink used within this timeframe will print with the same precision as brand new bottles.

AccuScan™ is currently available in black and is offered in 125ml, 500ml, and 1 liter bottles. Red and blue inks will launch in August.
